DIEHARD™ FLOWER BED

Part 1: Product Description

All Flower Beds shall be amended with live beneficial mycorrhizal fungi when planting. Product shall contain highly selected endomycorrhizal fungi that will quickly colonize the roots of flowering plants to provide the best possible conditions for the roots to grow and extract from the root zone water and nutrients. The fungi are combined with *Trichoderma*, humic acids, beneficial bacteria, soluble sea kelp, and yucca plant extracts to promote rapid root development. To reduce transplant stress and watering maintenance, and to absorb all soluble components of the formulation, a water management gel is added.
